Rose Electronics® warrants the UltraLink E-Series KVM IP System and Device Manager Software to be in good working order for one year from the date of purchase from Rose Electronics or an authorized dealer. Should this product fail to be in good working order at any time during this one-year warranty period, Rose Electronics will, at its option, repair or replace the Unit as set forth below. Repair parts and replacement units will be either reconditioned or new. All replaced parts become the property of Rose Electronics. This limited warranty does not include service to repair damage to the Unit resulting from accident, disaster, abuse, or unauthorized modification of the Unit, including static discharge and power surges.

Limited Warranty service may be obtained by delivering this unit during the one-year warranty period to Rose Electronics or an authorized repair center providing a proof of purchase date. If this Unit is delivered by mail, you agree to insure the Unit or assume the risk of loss or damage in transit, to prepay shipping charges to the warranty service location, and to use the original shipping container or its equivalent. You must call for a return authorization number first. Under no circumstances will a unit be accepted without a return authorization number. Contact an authorized repair center or Rose Electronics for further information.

ALL EXPRESS AND IMPLIED WARRANTIES FOR THIS PRODUCT INCLUDING THE WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE, ARE LIMITED IN DURATION TO A PERIOD OF ONE YEAR FROM THE DATE OF PURCHASE, AND NO WARRANTIES, WHETHER EXPRESS OR IMPLIED, WILL APPLY AFTER THIS PERIOD. SOME STATES DO NOT ALLOW LIMITATIONS ON HOW LONG AN IMPLIED WARRANTY LASTS, SO THE ABOVE LIMITATION MAY NOT APPLY TO YOU.

IF THIS PRODUCT IS NOT IN GOOD WORKING ORDER AS WARRANTED ABOVE, YOUR SOLE REMEDY SHALL BE REPLACEMENT OR REPAIR AS PROVIDED ABOVE. IN NO EVENT WILL ROSE ELECTRONICS BE LIABLE TO YOU FOR ANY DAMAGES INCLUDING ANY LOST PROFITS, LOST SAVINGS OR OTHER INCIDENTAL OR CONSEQUENTIAL DAMAGES ARISING OUT OF THE USE OF OR THE INABILITY TO USE SUCH PRODUCT, EVEN IF ROSE ELECTRONICS OR AN AUTHORIZED DEALER HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES, OR FOR ANY CLAIM BY ANY OTHER PARTY.

SOME STATES DO NOT ALLOW THE EXCLUSION OR LIMITATION OF INCIDENTAL OR CONSEQUENTIAL DAMAGES FOR CONSUMER PRODUCTS, SO THE ABOVE MAY NOT APPLY TO YOU. THIS WARRANTY GIVES YOU SPECIFIC LEGAL RIGHTS AND YOU MAY ALSO HAVE OTHER RIGHTS WHICH MAY VARY FROM STATE TO STATE.

INTRODUCTION

Disclaimer
While every precaution has been taken in the preparation of this manual, the manufacturer assumes no responsibility for errors or omissions. Neither does the manufacturer assume any liability for damages resulting from the use of the information contained herein. The manufacturer reserves the right to change the specifications, functions, circuitry of the product, and manual content at any time without notice.

The manufacturer cannot accept liability for damages due to misuse of the product or other circumstances outside the manufacturer's control. The manufacturer will not be responsible for any loss, damage, or injury arising directly or indirectly from the use of this product. (See limited warranty.)

System Introduction
Thank you for choosing the UltraLink E-Series Device Manager, a software tool that simplifies management of the UltraLink E-series KVM IP System. It contains a wide variety of functions for maintaining UltraLink E-Series systems, consisting of local Transmitters, remote Receivers, and connections between them. The Transmitter and Receiver devices can be assigned to groups so that they can be simultaneously managed. Transmitters and Receivers can be connected or disconnected with a mouse-click. User accounts with password protected access rights can be created.

Detailed information windows show which devices in the system are active, and the connections established between them. Device status is displayed in coded colors for rapid overview.

Features
- Transmitter and Receiver devices are automatically detected, but can also be manually added
- Names can be assigned to devices for easy identification
- Devices can be grouped to filter views and make managing them easier, applying the same settings to multiple units simultaneously
- EDID can be chosen to allow using different kinds of displays
- Allows creating and establishing connections between Transmitters and Receivers, forming one-to-one, many-to-one, one-to-many, or many-to-many configurations
- Users and User Groups can be created in Device Manager; user rights can be managed directly through the software or using Microsoft Active Directory Services
- Audio, video and USB are AES-encrypted for increased security
- Color-coded view shows all devices and their connection status
- Receiver OSD provides user login and connection capability
- Programmable keyboard shortcuts in the Receiver to quickly do tasks, such as switching to a different transmitter, or displaying the OSD
System Requirements

The UltraLink E-Series Device Manager Software has the following system requirements.

- **Supported UltraLink E-Series Hardware:**
  - The 2-port and 4-port PCIe transmitter cards (ULE-TXC2 / ULE-TXC4)
  - The 2-port transmitter and receiver standalone units (ULE-TXA2 / ULE-RXA2)
  - The 4-port transmitter and receiver standalone units (ULE-TXA4 / ULE-RXA4)

- **Supported Operating Systems:**
  - Windows® Server® 2016
  - Windows® 10 (64-bit)
  - Windows® Server® 2008 R2
  - Windows® 7

**Note:**
On Windows® Server® 2016 and Windows® Server® 2008 R2, the SSDP Discovery service, network discovery, and file sharing must be enabled.

- To assign an initial IP address to the devices, a DHCP (Dynamic Host Configuration Protocol) server is required.
- Make sure all Transmitter and Receiver devices are using the latest version of the product firmware. Also, all devices must use the same version of the firmware package. The version of the firmware package must also match the version of the Device Manager software package.
Installing the UltraLink Device Manager software

The UltraLink E-Series devices must be connected before configuring the Device Manager software. For more information on the connection setup of your product, see the UltraLink E-series hardware manual.

Whenever the connection setup is changed, make sure the correct connectors are used and that all connectors are properly fastened. Also, don’t change connections while the Transmitter and Receiver are turned on.

To install the software for your UltraLink E-Series product, run the installation program for your software package on any computer connected to the network. Follow the on-screen instructions.

Accessing the UltraLink Device Manager software interface (Windows 7/10)

- Windows 10 or 7 – Easiest way is to type ultralink into the search bar and choose the ultralink app
- Optionally add an icon to our taskbar or desktop

Note:
Only one copy of the Device Manager needs to be installed.
Getting started

This section describes the main menu and basic functions of UltraLink Device Manager. It also provides an overview of your system environment and devices.

<tr>
<td>Undo Changes</td>
<td>Click this to undo the last changes made.</td>
</tr>
</tbody>
</table>

Table 4. Main menu basic functions
Understanding Device Manager Layout

In the Device Manager, UltraLink devices are depicted as colored tiles and sorted into groups. To understand the status of your devices, see Understanding the status of the devices.

![Device Manager Layout](image)

**Figure 2. Device Manager – device groups**

**Device groups**
When the Device Manager is started for the first time, or whenever a new device is detected, the device or devices are added to the **New devices** group. These devices can then be sorted into groups.

**Managing device groups**
- To collapse or expand the tile list under a group, click the **Up/Down arrow** to the left of the group name.
- To create a new tile group, right-click a tile, select **Move to group → Create a new device group** and then enter a new **Name**. The tile used to create the new group moves to that new group.
- To reorder the groups, right-click next to the group name and then select a location for that group in the group list.
- To rename a group, double-click the group name, and then enter a new name for the group.
- To undo a group, drag the tiles out of that group and into a blank area.
Device tiles

The tile provides the following information about your device

![Device Tile Information](image)

<table>
<thead>
<tr>
<th>Item</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>A</td>
<td>Device type identified by icon</td>
</tr>
<tr>
<td></td>
<td>TX - Transmitter device</td>
</tr>
<tr>
<td></td>
<td>RX – Receiver device</td>
</tr>
<tr>
<td>B</td>
<td>Device serial number</td>
</tr>
<tr>
<td>C</td>
<td>Device name, device serial number, or IP address, depending on the status of the device. It also indicates if the device is Connected to a device (and the name of the connected device or user name), or Not connected to a device.</td>
</tr>
<tr>
<td>D</td>
<td>Device status (tile color and border color). For more information, see Understanding the status of the devices.</td>
</tr>
</tbody>
</table>

Table 5. Device tile details

Managing the device tiles
- To reorder the tiles, drag a tile to a new location.
- To move a tile to a different group, drag the tile to a new group. This can also be accomplished by right-clicking the tile and selecting a group.
- To access the settings of a device, select a device, and then click Open settings.
- To rename a device, click Open settings, and then enter a new Name for that device.
- To delete a device that's lost or undetected, click the Delete icon. This can also be done by right-clicking the tile and clicking Remove lost devices.

Filtering the device tiles
The devices can be filtered by status, privileges, and device type. The number at the top indicates the total number of devices. The number in the colored tile indicates the number of devices with that status.

To filter the devices, click the appropriate tile. Multiple tiles can be selected to view devices with different statuses. While filtering is in effect, at least one tile is highlighted.

![Device Filters](image)
Showing Details
Click this to determine how much information to show on the device tile in the Device Manager main interface. To show only the device name (except when the device is selected or when hovering over it with the mouse), click Show less details. To show all device information (including the device name, serial number, and status), click Show more details.
Opening the information dashboard

To see the current status and information of a device, select the device and then click the Down Arrow at the bottom of the Device Manager main interface window. This opens an information dashboard.

![Information Dashboard](image)

**Figure 5. The information dashboard**

The dashboard provides the Details (such as the device type and software information, telemetry, detected monitors, and inputs) of a device and streaming Statistics for each monitor connected to that device.

Understanding the status of the devices

Depending on the status of a device, the color of the tile changes.

<table>
<thead>
<tr>
<th>Tile color</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><img src="image" alt="Green" /></td>
<td>Active (Green)</td>
</tr>
<tr>
<td><img src="image" alt="Bright Green" /></td>
<td>Connected (Bright Green)</td>
</tr>
<tr>
<td><img src="image" alt="Yellow" /></td>
<td>Unresponsive (Yellow)</td>
</tr>
<tr>
<td><img src="image" alt="Red" /></td>
<td>Error detected (Red)</td>
</tr>
<tr>
<td><img src="image" alt="Light Grey" /></td>
<td>Detected (Light Grey)</td>
</tr>
<tr>
<td><img src="image" alt="Dark Grey" /></td>
<td>Lost (Dark Grey)</td>
</tr>
<tr>
<td><img src="image" alt="Black" /></td>
<td>Undetected (Black)</td>
</tr>
</tbody>
</table>

**Table 6. Device tile status**
Depending on the user access privileges to a device, the color of the tile border changes.

<table>
<thead>
<tr>
<th>Tile appearance</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>View only (Red border)</td>
<td>Device can be accessed and the settings of the device can be viewed but not modified. To modify the settings, a valid user name and password is required. The devices must be configured with the user name and password.</td>
</tr>
<tr>
<td>No administrator (Red dotted border)</td>
<td>Device can be accessed, and the settings of the device can be viewed, but not modified. To modify the settings, the user must take ownership of that device (see Basic Setup - Take ownership of a device).</td>
</tr>
<tr>
<td>Unknown (Grey border)</td>
<td>Device can be accessed but no password was created. You will be prompted for a password when you click Apply. Once a password is provided, the status becomes View only.</td>
</tr>
<tr>
<td>Modify settings (Black border)</td>
<td>Device can be accessed and the settings can be modified (a valid password has been provided).</td>
</tr>
</tbody>
</table>

Table 7. Device tile change of status

System Setup

The quick setup checklist provides an overview of the steps needed to quickly configure the Device Manager software and devices.

Before beginning

- **Before** configuring UltraLink Device Manager software, make sure the product is connected and that all the Transmitter and Receiver devices are turned on and have power. For more information on connection setup, see the UltraLink E-series user manual.
- Make sure all the Transmitter and Receiver devices are using the latest version of the product firmware. Also, all devices on a network must use the same version of the firmware package. The version of the firmware package must match the version of your Device Manager software package.
- Make sure latest version of Device Manager software is installed on a separate computer (see Installing the Device Manager software).
- Make sure all of the devices are detected and listed in the main interface. For more information, see Discovering Devices Manually.

Basic Setup

Follow the steps below in sequence to set up a Transmitter or Receiver device in the Device Manager.

1. Log into the Device Manager
   a. In the Device Manager main menu, click Log in.
   b. Specify whether logging in as a Local user or a Domain user:
      - Local user – Enter user name and password.
      - Domain user – Enter user name, the domain name of the server, and network password.
   c. When done, click Apply. For more information, see Logging in and out of Device Manager.
2. Take ownership of a device
   If the status of a device is No device administrator, the user must Take ownership of that device.
a. From the main interface, select the Transmitter or Receiver devices to be managed (these devices must be without an administrator). Click the **Take ownership** icon in the upper right corner of a device tile and then click **Yes**.

b. To see only these devices in the **Connection broker**, move them to one or more groups. For more information, see *Managing Users and Passwords*.

3. Allow device connections

   a. From the main menu, select **Connection broker**.
   
   b. Make sure all of the UltraLink E-Series devices are detected and listed in the main interface. For more information, see *Discovering Devices Manually*.
   
   c. If a device group was created, click **Filter by group**, select the group, and then click **Close**.
   
   d. Click the ✔️ icon to allow the connection between the Transmitter and Receiver devices.
   
   e. Click **Apply**. For more information, see *Using the Connection Broker*.

4. Manage the users

   a. From the main menu, select **Manage users**.
   
   b. Click **Add user** and then enter a user name. Specify if it's a **Local user** or a **Domain user**.
   
   c. When done, click **OK**.
   
   d. Click the ✅ icon for each device a user is to be added to. Adding a user to a device enables the user to log into a Receiver and connect to a Transmitter. To allow the connection to a Transmitter, the connection must also be allowed in the **Connection broker** (see *Allowing a connection between devices*). To view the users and connections allowed for a device, select that device next to **Display users for** when assigning privileges.
   
   e. Repeat steps b through d for each user to be added.
   
   f. When you’re done, click **Apply**. This creates a **Local users summary** and generates a device password for each local user. To copy the summary to the clipboard, click **Copy to clipboard** (⌘). To close the dialog box, click **OK**. For more information, see *Managing Users and Passwords*. 
Using Quick Setup

Use the quick setup checklist to quickly configure the software and devices.

To use the quick setup checklist:

1. The **quick setup** checklist launches automatically the first time the Device Manager software is opened. The quick setup checklist can also be accessed from the Device Manager main menu by selecting **Quick setup**.

2. Make sure all the devices are detected and listed in the main interface (see *Discovering Devices Manually*).

3. Once all the devices are detected, start the setup by clicking **Show** next to the first item in the list. Once that item is configured, a black checkmark appears (✔).

4. Repeat step 3 for each item in the list.
Logging in and out of Device Manager

To log into Device Manager:

1. From the Device Manager main menu, click **Log in**.
2. Specify **Local user** or **Domain user**:
   a) **Local user** – Enter user name and password.
   b) **Domain user** – Enter user name, the domain name of the server, and your network password.
3. When done, click **Apply**.
4. To log out, click **Log out** from the main menu of Device Manager.

For more information, see **User Access**.

User Access

This section describes the types of users that are supported by the Device Manager, and their access privileges.

UltraLink E-Series Administrator

The UltraLink E-Series administrator:
- Creates device administrators for each device.
- Edits and manages user accounts (Local users and Domain users), and their privileges.
- Allows device connections between Transmitters and Receivers.

Local Users

Local users are defined by the UltraLink E-Series administrator and managed through Device Manager.

To obtain a local user name and device password for a local user (or if the user name or device password has been forgotten), contact the UltraLink E-Series administrator. To change the current password, see the next section.

Changing the device password (local users only)

If the status of a device is **View only**, the device password must be changed to match the user’s current password. To update the user’s password, click **Change password** from the Device Manager’s main menu.

To change the device password to match the current password, select the device tile and click the **Update password** icon (/pub) in the upper right corner of the device tile. Enter a valid device password, and then click **OK**.

If the device password is successfully changed, the status of the device is updated to **Modify settings**. If the status of the device remains **View only**, contact the administrator of that device to change the user’s settings. For more information, see **Understanding the status of the devices**.

Notes:
- Don’t change the password of a local user while a connection is enabled (for example, while a user is logged into the OSD). Changing a password while a connection is enabled will prevent a user from accessing and using the OSD.
- Passwords are case-sensitive and must contain at least 6 alphanumeric characters.
Domain Users

Domain users are defined by your network administrator and managed through an Active Directory® network. The UltraLink E-Series’ software and hardware use Active Directory to authenticate the user name and password of domain users.

The Device Manager supports user groups. A domain user who’s also part of a user group is granted the highest privilege available (as a user group member or as an individual user). For more information, contact the network administrator.

To obtain a user name and password for a domain user (or if the domain user name or password has been forgotten), contact the network administrator.
Discovering Devices Manually

The Device Manager automatically detects and adds new devices to the system environment. If devices aren’t automatically detected, Device Manager can scan one or more specific IP addresses or a range of IP addresses for available devices.

Scanning one or more IP addresses

1. From the Device Manager menu, select Manual Device Discovery.
2. Select Scan a list of IP addresses.
3. Enter the IP address of the device to be added.
4. Click Add to list.
5. Repeat steps 3 and 4 for all the addresses to be added to the list.
6. When done, click Scan list.

If new devices are found at the IP addresses provided, they are added to the New devices group.

Figure 7. Scanning for an IP addresses

Scanning a range of IP addresses

1. From the Device Manager menu, select Manual Device Discovery.
2. Select Scan a range of IP addresses.
3. Enter the starting and ending IP addresses of the range to be scanned.
4. Enter the subnet mask to use when scanning for IP addresses. For more information on the subnet mask to use, contact the network administrator.
5. Click Scan range. If the starting or ending addresses are invalid, the Scan range button is disabled.

If a new device is found, that device is added to the New devices group.

Figure 8. Scanning for a range of IP addresses
Using the Connection Broker

The connection broker provides a grid view of the UltraLink E-Series Transmitter and Receiver devices in the system. Use the connection broker to set and manage the permissions for allowing connections between your transmitter and receiver devices.

![Figure 9. The connection broker grid](image)

Understanding the icons

<table>
<thead>
<tr>
<th>Icon</th>

<td>✔</td>
<td>Devices are available, but a connection between a Transmitter and Receiver hasn’t been allowed.</td>
</tr>
<tr>
<td>HID</td>
<td>Reserve USB HID (Human Interface Device). This enables reservation of the USB port so that previously connected devices (keyboard or mouse) can connect more quickly. When this is enabled, the number of HID devices will be listed. The maximum number of USB reservations supported is 16.</td>
</tr>
<tr>
<td>✔</td>
<td>USB HID hasn’t been reserved.</td>
</tr>
<tr>
<td>✔</td>
<td>Shared connection with a guest is allowed.</td>
</tr>
<tr>
<td>❓</td>
<td>Devices may be unresponsive, lost, or undetected.</td>
</tr>
<tr>
<td>❗</td>
<td>Conflict has been detected between a Transmitter and Receiver.</td>
</tr>
<tr>
<td>▶</td>
<td>Fast switching between Transmitters is enabled.</td>
</tr>
<tr>
<td>▶</td>
<td>Fast switching between Transmitters hasn’t been enabled.</td>
</tr>
</tbody>
</table>

Table 8. The connection broker icons

Allowing a connection between devices

1. From the main menu of the Device Manager, select **Connection broker**.
2. If a device group was created, click **Filter by group**, select the group, and then click **Close**.
3. Click the ✔ icon to allow the connection between the Transmitter and Receiver devices.
4. When done, click **Apply** to apply the changes.

Filtering by group

The devices can be filtered by group. To filter the groups, select the groups to be viewed, and then click **Close**. To select all the groups, click **Select all**.
Managing Users and Passwords

To be able to access and use a device, a user must be added to that device and given privileges.

![Figure 10. Users Grid](image)

Adding Users

To add a user to a device:

1. Click **Add user** and then enter a user name. Specify if a Local user or a Domain user is being added.
2. When done, click **OK**.
3. Click the **Add** () icon for each device for which the user is to be added. Users can log into a Receiver and connect to a Transmitter. To be able to connect to a Transmitter, that connection must also be allowed in the Connection broker (see **Allowing a connection between devices**).
   
   When granting privileges, only the users and the connections allowed for a device can be viewed by selecting that device next to **Display users for**.
4. Repeat step 1 to step 3 for each user to be added.
5. When done, click **Apply**. This creates a **Summary of the local users created** and generates a device password for each local user.
   
   To copy the summary to the clipboard, click **Copy to clipboard** ()
6. To close the dialog box, click **OK**.

Deleting Users

To delete a user from a device:

1. Select the user to be deleted and then click **Delete user from device**.
2. When done, click **Apply**.

Overwriting a password (local users only)

To overwrite the password of a local user:

1. Select the user whose password is to be overwritten and then click **Overwrite password**.
2. Enter the new password, confirm the password entered, and then click **Change**.
3. When done, click **Apply**.

Granting Privileges

You can grant device **Administrator** () or **User** () privileges to a user.

If **Automatic login** () is allowed for a device, this is also displayed. For more information, see **Logging in Automatically (Local Users Only)**.

Logging in Automatically (Local Users Only)

To automatically log a local user into the On-Screen Display (OSD), select the **Automatic login** permission.
Transmitter Settings

This section describes how to view, configure, and manage the settings of an UltraLink E-Series Transmitter.

Sharing

This option is used to select if and how to share the Transmitter with a guest.

**Guest connections**
- **No guest allowed** – Don’t allow guest connections.
- **Guest allowed (without USB devices)** – Allow guest connections. The first user connected to the system has control of keyboard and mouse. Guest connections can connect to the system, but don't have control of USB devices (no keyboard or mouse).
- **Guest allowed (with USB devices)** – Allow guest connections. Guest connections have control of keyboard and mouse.

**Show name of connected user**
Show the name of the user connected to the device.

**Show previews in OSD when a user is connected**
Show a monitor preview in the On-Screen Display (OSD) when a user is connected to the selected Transmitter.

Table 9. Transmitter Sharing Option

**EDID**

EDID management enables selection of EDID settings to be used by the input connectors on the UltraLink E-Series Transmitter device.

![Figure 11. Transmitter EDID Management](image)
The UltraLink E-Series Transmitter has two options for the EDID source: **Cached** and **Fixed**. They control where the Transmitter picks the EDID from if a monitor isn’t connected to an output connector on the Receiver (for example, if the monitor was disconnected).

If a monitor is connected to an output connector on the Receiver, the Transmitter will use the EDID settings of that monitor.

If a monitor isn’t connected to an output connector on the Receiver, the Transmitter picks the EDID based on the EDID setting as follows.

- If **Cached** mode is enabled, the Transmitter uses the EDID settings of the monitor that was last connected to that output connector.
- If **Fixed** mode is enabled, no EDID is applied. The EDID can be loaded from a file or completely disabled.

To avoid unwanted changes to the source computer’s video output, it is recommended that a fixed EDID is used on all Transmitter inputs (including inputs not connected to the system).

**Using the EDID from a file**

The EDID settings must be exported before they can be imported. For more information, see *Exporting EDID Settings to a File*.

1. From the list, select the monitor (output) to be used.
2. Make sure the output is set to use a **Fixed** EDID.
3. Next to **Use EDID from file**, click **Import**.
4. Browse to the location where the EDID file has been saved, and it (**.bin**).
5. Click **Apply** for the changes to take effect.

**Reporting no monitor**

When using the following resolutions, make sure the Transmitter reports only the monitors supported as listed in the table below.

<table>
<thead>
<tr>
<th>Resolution</th>
<th>Number of Monitors Supported</th>
</tr>
</thead>
<tbody>
<tr>
<td>3840 × 2160 @ 60 Hz</td>
<td>1 (connector 4)</td>
</tr>
<tr>
<td>3840 × 2160 @ 30 Hz</td>
<td>2</td>
</tr>
<tr>
<td>1920 × 1200 @ 60 Hz</td>
<td>3</td>
</tr>
<tr>
<td>1920 × 1080 @ 60 Hz (or lower)</td>
<td>4</td>
</tr>
</tbody>
</table>

*Table 10. Special Resolutions and Number of Monitors Supported at Transmitter*

The Transmitter must report the other monitors as disconnected (no monitor). Follow the steps below to configure the Transmitter to report the monitors that are disconnected.

1. From the list, select the monitor (output) that’s not used by the Transmitter. Make sure the output is set to use a **Fixed** EDID.
2. Next to **Report no monitor**, click **No monitor**.
3. Repeat steps 1 to 3 for each monitor (output) that’s not used by the Transmitter.
4. Click **Apply** for your changes to take effect.
Using the current EDID
1. From the list, select the monitor (output) whose EDID is to be used.
2. Make sure the output is set to use a **Fixed** EDID.
3. Next to **Use current EDID**, click **Use current**.
4. Click **Apply** for the changes to take effect.

Streaming
This contains the streaming and encryption settings for the device. The options are listed in the table below.

<table>
<thead>
<tr>
<th>Option</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Encrypt A/V stream</td>
<td>Secure the stream. This option is enabled by default.</td>
</tr>
<tr>
<td>Encoding quality</td>
<td>Set the level of encoding (<strong>Low</strong>, <strong>Typical</strong>, <strong>High</strong>, or <strong>Very high</strong>). The default is <strong>Typical</strong>. For a private Wide Area Network (WAN) deployment, set the quality to <strong>Low</strong>.</td>
</tr>
</tbody>
</table>
| Routing scheme     | • **Unicast** – When selecting unicast, the destination IP address of the stream can be specified.  
                    • **Multicast** – Enter the **Multicast address** of the stream. Using multicast may require additional network configuration to support the transmission protocol (some network switches and routers can block multicast signals). This is the default.  
                    For more information, contact the network administrator |
| Multicast address  | If **Multicast** is selected, enter the **Multicast address** (for each port) of the stream. |

**Note - Selecting a routing scheme:**
- **Unicast** – Unicast establishes a direct connection between a Transmitter and a Receiver.
- **Multicast** – A single stream is received by all the Receivers connected to the same multicast address. When transmitting to multiple Receivers, a Transmitter that's properly configured for multicast transmission uses less bandwidth.

Exporting the UltraLink E-Series stream addresses (for a display wall)
To use the UltraLink E-Series with a display wall product, the UltraLink E-Series stream addresses must be exported. This enables the display wall to connect to your Transmitter device. Follow the steps below to export the stream addresses:

1. Click **Export stream addresses**.
2. Browse to the location where you want to save your file.
3. When prompted, enter a **File name** and then click **Save**.
Network
This contains the network settings (LAN1 and LAN2) for the connection and IP address of the device.

Note:
When the IP address or the method of assigning an IP address to a device changes, the device must be rebooted for the changes to take effect.

Enabling Link Redundancy
Use the Enable link redundancy option to ensure network availability in case of network cable or switch failure. When enabled, when a network cable or switch failure occurs, the device will automatically switch to a secondary network path. Depending on the network, switching may take up to 5 seconds.

This option must be enabled on both Transmitter and Receiver devices.

Note:
Before enabling this option, make sure the devices are on the same subnet and connected to a switch. If multiple switches are used, they must be connected to each other. For more information on connecting the UltraLink E-Series device, see Appendix B - Setting Up Link Redundancy.

Dynamic IP addressing
By default, Dynamic IP address (DHCP) is used. The Device Manager automatically detects all the connected UltraLink E-Series devices in the same subnet as the controller system through the UPnP (Universal Plug and Play) protocol.

Static IP addressing
Once the Device Manager has detected a device, a static IP address can be manually assigned to the device through the Network settings of the product. When doing so, the following must be specified.

<table>
<thead>
<tr>
<th>Address type</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>IPv4 address</td>
<td>An IP address between 192.168.0.0 and 192.168.255.255 (recommended). Assigning an IP address within the subnet of the network is recommended.</td>
</tr>
<tr>
<td>IPv4 netmask</td>
<td>The netmask defining group of IP addresses in the subnet. By default, the subnet mask is 255.255.255.0.</td>
</tr>
<tr>
<td>IPv4 gateway</td>
<td>The gateway is often the same as the IP address, but the last byte may be 0 or 1.</td>
</tr>
<tr>
<td>DNS servers</td>
<td>The address of the DNS (Domain Name System) server or servers. If multiple addresses are entered, separate each address with a space.</td>
</tr>
</tbody>
</table>

Table 12. IP address settings

Maximum Transmission Unit
The Maximum Transmission Unit (MTU) range supported is 1280 to 1500. The default is set to 1500. For a private Wide Area Network (WAN) deployment, it is recommended that its value is initially set to 1400 while configuring the units, and then adjusted as needed.

Date and time
Use this to update the date, time, and time zone of the Transmitter device. For more information, see Adjusting the Date and Time of the Device.
## More Options

<table>
<thead>
<tr>
<th>Option Name</th>
<th>Option Description</th>
</tr>
</thead>
</table>
| **Power recovery policy** | Set up the option to start up the device after a power loss.  
  - *Never start* – Never turn on your device after a power loss.  
  - *Always start* – Always turn on the device after a power loss.  
  - *Restore last state* – Always turn on and restore the last state of the device after a power loss.                                                                 |
| **Power button control**  | Enable the `Disable shutdown` option to prevent the device from being manually shut down                                                                                                                                 |
| **Reboot control**        | Turn on the `Enable force reboot` option to remotely force a reboot of your device if it stops responding.                                                                                                               |
| **Wake-on-LAN control**   | Turn on the `Enable Wake-on-LAN` option to remotely wake up a device                                                                                                                                               |
| **Advanced display modes**| UltraLink E-Series 4-port devices only – Turn on the `Enable advanced display modes` option to support the following display modes:  
  - 1× 3840×2160@60Hz + 1× 1920×1080@60Hz  
  - 1× 3840×1440@60Hz + 1× 1920×1080@60Hz  
  - 4× 2560×1600@60Hz  
  - 4× 1920×1200@60Hz                                                                                                                                     |
| **Logs**                  | - *Download device logs* – Download the log files. This file contains information on the devices. This information is used by Rose Technical Support for debugging purposes.  
  - *Erase device logs* – Erase the log files created for the devices.                                                                                   |
| **Audits**                | Download the audit file. This file contains information on the user interactions with the devices. This information is used by the UltraLink E-Series administrator.                                                             |
| **Troubleshooting**       | The following options are useful for troubleshooting the devices:  
  - *Audio* – Turn on the `Disable audio` option to disable the audio on the 3 device. The device will reboot for this change to take effect.  
  - *Debug configurations* – Get help and troubleshooting information for the configuration. For more information, contact Rose Technical Support.                                                                 |
| **Locate transmitter card** | *Transmitter card only* – To see where the Transmitter card is located, turn on the `Enable LED to locate card` option. The card can be identified by a red LED light on the bracket of the card.                                      |

### Table 13. Additional Transmitter Options

**Note:**
Depending on the UltraLink E-Series product, certain options may not be available.
Receiver Settings

This section describes how to view, configure, and manage the settings of an UltraLink E-Series Receiver.

Connection

This enables remotely connecting a Receiver to a Transmitter, disconnect a Transmitter, and switching connections.

Connection status of the Receiver

This shows the name and IP address of the Transmitter device connected to the Receiver. Depending on the connection settings of the Transmitter, this may also show the name of the user connected to the Transmitter device (see Sharing).

To stop this connection, click Disconnect.

Connection settings for the Transmitter

This shows the Transmitter devices that are available to be connected to the Receiver, based on the connections specified in the connection broker.

For information on setting an allowed connection between a Receiver device and a Transmitter device, see Using the Connection Broker.

<table>
<thead>
<tr>
<th>Switch</th>
<th>If already connected to a Transmitter, select the new Transmitter for connection to the Receiver, and then click Switch.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Connect</td>
<td>If not yet connected to a Transmitter, select the new Transmitter for connection to the Receiver, and then click Connect.</td>
</tr>
</tbody>
</table>

Table 14. Connection Options

Selected outputs

Select the monitors to use when connecting to a Transmitter. The outputs represent the physical connections on the Transmitter. For example, to use a 4K resolution, disable outputs 1, 2, and 3, and select only output 4 (connector 4).

If an output is not to be used, click that output. When the output is disabled, the monitor icon ( ▼ ) turns black ( △ ). A disabled output means that monitor won’t be used when connecting to a Transmitter.
Monitors
This lists the monitors currently connected to the Transmitter device. This also enables exporting the EDID settings of the connected monitors to a file.

Monitor Power Saving
Enable Allow monitors to enter power saving mode to turn off the display after x minutes of inactivity. When done, click Apply.

Monitor connections
Optimizing video mode compatibility
Different monitor models can support different video parameters (such as resolutions, formats, or EDID). In a setup with multiple displays, the image quality or performance of different displays may vary. The Optimize video mode compatibility with monitors option can improve image quality of the displays and optimize monitor compatibility with the device. This option is enabled by default.

Aggregator mode: Behavior of unused monitors
Aggregator mode only – Select how to manage the monitors that are part of the layout but not in use (for example, if the monitor layout is made up of 4 monitors, but only 2 monitors are currently being used). The unused monitors can be kept awake or forced into standby mode.

<table>
<thead>
<tr>
<th>Put monitors in standby</th>
<th>Force all monitors not used in the monitor layout into standby mode.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Keep monitors awake</td>
<td>Keep all monitors not used in the monitor layout awake.</td>
</tr>
</tbody>
</table>

Table 15. Options for Unused Monitors in Aggregator Mode

Exporting EDID Settings to a File
1. Select a monitor whose EDID is to be exported and then click Export.
2. Save the EDID file (.bin) to a folder or directory.
3. When prompted, click OK.
USB

USB device management options enable viewing and authorization of the USB devices which can connect to the Receiver.

![USB Device Management](image)

**Figure 13. USB Device Management**

**Authorizing USB devices**

To authorize all HID (Human Interface Devices) USB devices, enable **Authorize all HID USB devices**. To authorize all non-HID USB devices, enable **Authorize all non-HID USB devices**.

A USB device that's authorized is identified as 🔄. It also indicates if a USB device is currently **Connected** or **Disconnected**. A USB device can be manually blocked from being connected. To manually block a USB device, disable the option, and then click the 🔄 icon next to the selected device. A device that's blocked is identified as ❌.
Audio
This contains the audio settings for the device.

* Four-port device with four video sources from system and unique transmitter connection shown. The Line In and Line Out connectors are not present on UltraLink E-Series transmitter cards.

Figure 14. Audio Connections

Preventing changes through the OSD
Users can also configure audio settings through the on-screen display (OSD). To prevent this, turn on the Prevent the user from modifying the following audio settings using the OSD option.

Configuring audio settings
Depending on the connection type (to a unique transmitter or to multiple transmitters), select the audio setting as follows.

- **Headphone audio source** – Select the Transmitter audio source for the headphones.
- **Line Out audio source** – Select the Transmitter audio source for the Line Out connector.
- **Microphone or Line In audio source** – Select the Transmitter audio input for the Microphone or Line In device from the Receiver.

For more information on selecting the proper audio settings, see Configuring audio settings.

Transmitter Discovery
This enables detection of and connection to devices that are on multiple subnets, a WAN network, or a unicast-only network.

Discovery status of transmitters
This shows the name and IP address of the Transmitter device connected to the Receiver.

IP address to scan
Enter the IP address for the device to be scanned. When done, click Add to list → Apply.

Network to scan
Enter the CIDR (Classless Inter-Domain Routing) subnet mask for the network to scan. When done, click Add to list → Apply.
Network
This contains the network settings (LAN 1 and LAN 2) for the connection and IP address of the device.

Note:
When the IP address or the method of assigning an IP address to a device changes, the device needs to be rebooted for the changes to take effect.

Enabling Link Redundancy
Use the Enable link redundancy option to ensure network availability in case of network cable or switch failure. When enabled, when a network cable or switch failure occurs, the device will automatically switch to a secondary network path. Depending on the network, switching may take up to 5 seconds.

This option must be enabled on both Transmitter and Receiver devices.

Note:
Before enabling this option, make sure the devices are on the same subnet and connected to a switch. If multiple switches are used, they must be connected to each other. For more information on connecting the UltraLink E-Series device, see Appendix B - Setting Up Link Redundancy.

Dynamic IP addressing
By default, Dynamic IP address (DHCP) is used. The Device Manager automatically detects all the devices in the same subnet as the controller system through the UPnP (Universal Plug and Play) protocol.

Static IP addressing
Once the Device Manager has detected a device, a static IP address can be manually assigned to the device through the Network settings of the product. When doing so, the following must be specified.

<table>
<thead>
<tr>
<th>Address type</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>IPv4 address</td>
<td>An IP address between 192.168.0.0 and 192.168.255.255 (recommended). Assigning an IP address within the subnet of the network is recommended.</td>
</tr>
<tr>
<td>IPv4 netmask</td>
<td>The netmask defining group of IP addresses in the subnet. By default, the subnet mask is 255.255.255.0.</td>
</tr>
<tr>
<td>IPv4 gateway</td>
<td>The gateway is often the same as the IP address, but the last byte may be 0 or 1.</td>
</tr>
<tr>
<td>DNS servers</td>
<td>The address of the DNS (Domain Name System) server or servers. If multiple addresses are entered, separate each address with a space.</td>
</tr>
</tbody>
</table>

Table 16. IP address settings

Maximum Transmission Unit
The Maximum Transmission Unit (MTU) range supported is 1280 to 1500. The default is set to 1500. For a private Wide Area Network (WAN) deployment, it is recommended that its value is initially set to 1400 while configuring the units, and then adjusted as needed.

Date and time
Use this to update the date, time, and time zone of the Transmitter device. For more information, see Adjusting the Date and Time of the Device.
RS232
Enable this to virtualize an RS232 (or serial) connection.

![RS232 virtualization](image)

**Figure 15. RS232 Virtualization on the Receiver**

### Enabling RS232 virtualization
To enable RS232, turn on the **Enable RS232** option and then click **Apply**.

### Configuring the RS232 settings

<table>
<thead>
<tr>
<th>Setting</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Baud rate</strong></td>
<td>The speed, in bits per seconds (or baud), used for the RS-232 connection. The default is 115200</td>
</tr>
<tr>
<td><strong>Data bits</strong></td>
<td>The number of bits per block of data transmitted. The default is 8.</td>
</tr>
<tr>
<td><strong>Parity</strong></td>
<td>The type of parity bits (None, Odd, or Even) used for the data transmitted. The default is None.</td>
</tr>
<tr>
<td><strong>Stop bits</strong></td>
<td>The number of bits used to identify the end of a data block. The default is 1.</td>
</tr>
<tr>
<td><strong>Flow control</strong></td>
<td>The signal type (None or RTS/CTS) used to pause and resume data transmission. The default is None.</td>
</tr>
</tbody>
</table>

Table 17. Configuring the RS-232 connection

### Aggregator mode: RS232 destination
**Aggregator mode only** – Choose the transmitter for RS232 communication.
Keyboard Shortcuts

Keyboard shortcuts provide a way to quickly do certain tasks in the Receiver, such as switching to a different Transmitter, bringing up the On-Screen Display (OSD), or accessing the Dynamic sources tab directly to enable switching between sources.

Keystroke combinations can be assigned in the Keyboard shortcut customization screen. This screen appears when Keyboard shortcuts is selected in the settings screen for a Receiver. The settings screen can be opened by either right-clicking the Receiver tile and selecting Open settings or by double-clicking the Receiver tile.

Note:
A standalone key must be used with a modifier key (Alt, Shift, or Ctrl).

Accessing the on-screen display (OSD)
The default shortcut key for this is [Scroll Lock]. Follow the steps below to assign a new key combination for accessing the on-screen display (OSD).

1. Next to Switch USB to Display X, click the edit box.
2. Press a key combination (for example, [Left Ctrl] + [Left Shift] + [F10]). Repeat this for each Display (for example, 1, 2, 3, and 4) in your monitor layout.
3. Click Apply.

Aggregator mode: Accessing Dynamic sources
The default shortcut key for accessing the Dynamic sources tab directly on the OSD is [Right Shift] + [Scroll Lock]. Follow these steps to assign a new key combination.

1. In the Aggregator mode: Dynamic sources section of the Keyboard shortcut customization screen, click the edit icon next to Keyboard shortcut to clear the previous information. You can also click the edit box and press [Backspace] or [Delete].

2. Press a key combination (for example, [Ctrl] + [F10]).
3. Click Apply.
Aggregator mode: USB switching
Aggregator mode only – By default, the mouse can be used to switch between sources while using aggregator mode.

Keyboard shortcuts can also be used to switch sources. By default, keyboard shortcuts for switching are assigned. Follow the steps below to change a key combination for USB switching.

1. Next to **Switch USB to Display X**, click the edit box.
2. Press a key combination (for example, [Left Ctrl] + [Left Shift] + [F10]). Repeat this for each **Display** (for example, 1, 2, 3, and 4) in the monitor layout.
3. Click **Apply**.

To use only the keyboard shortcuts (no mouse) to switch sources, enable **Use only keyboard shortcuts (no mouse) for USB switching**.

Switching transmitters
Follow the steps below to assign a key combination for switching to a transmitter.

1. From the list of Transmitters, select a Transmitter.
   **Note:** The devices can be filtered by group. To filter the groups, select the groups to be viewed and then click **Close**. To select all the groups, select **Select all**.
2. Click the edit box next to the Transmitter.
3. Press a key combination (for example, [Ctrl] + [F10]).
4. Repeat steps 1 to 3 for each transmitter and when done, click **Apply**.

Removing keyboard shortcuts
To remove a keyboard shortcut, click the **Delete (🗑️)** icon. It can also be done by clicking the edit box and pressing [Backspace] or [Delete]. Then, click **Apply**.

</tbody>
</table>

Table 18. Additional Receiver Settings

Note:
Depending on the UltraLink E-Series product, certain options may not be available.
Importing and Exporting Device Settings

This enables backing up (exporting) and restoring (importing) the settings specific to an UltraLink E-Series Transmitter or Receiver.

Exporting

Follow the steps below to export the device settings.

5. Click **Export settings**.
6. Browse to the location where the “.backup” device file is to be saved.
7. When prompted, enter a **File name**, and then click **Save**.

Importing

Follow the steps below to import the device settings.

1. Click **Import settings**.
2. Browse to the location where the device backup file was saved.
3. Select the device file (“TX.backup” for a Transmitter or “RX.backup” for a Receiver) to be imported and then click **Open**.
Adjusting the Date and Time of the Device

Use this to update the date, time, and time zone of the UltraLink E-Series device.

The box at the top lists the current time settings. The Device Manager updates this information every two seconds.

**Note:**
After applying new settings, it may take some time for the changes to take effect.

**Setting the Date and Time**
The following options are used to set the date and time for the device.

<table>
<thead>
<tr>
<th>Option</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Use current date and time settings of the device</td>
<td>Keep the current date, time, and NTP (Network Time Protocol) synchronization settings for the devices. This is the default.</td>
</tr>
<tr>
<td>Use date and time of the current system</td>
<td>Use the date and time of the controller system to update the devices. This setting uses the time zone of the controller system. If your controller system and the device are using different time zones, the date and time will differ. This setting disables synchronization with an NTP server.</td>
</tr>
<tr>
<td>Use the following date and time</td>
<td>Use the date and time specified to update the devices. This setting doesn’t use the time zone of your controller system. The arrow keys can be used to change to the date and time specified. This setting disables synchronization with an NTP server.</td>
</tr>
<tr>
<td>Enable synchronization with an NTP server</td>
<td>Use an NTP server to update the date and time for the device at regular intervals. You must provide a server URL even if one is already stored on the device. For more information on using NTP, contact a network administrator.</td>
</tr>
<tr>
<td>Disable synchronization with an NTP server</td>
<td>Stop using an NTP server to update the date and time for the device. Disabling NTP keeps the current date and time of the device, but it won’t update the devices at regular intervals.</td>
</tr>
</tbody>
</table>

Table 19. Options for Setting the Date and Time
Setting the Time Zone
Select the time zone to be used for the device. When using an NTP server, it is recommended that the time zone of the device is set.

<table>
<thead>
<tr>
<th>Option</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Use current time zone of the device</td>
<td>Use the time zone currently set for the devices. This is the default.</td>
</tr>
<tr>
<td>Use the following time zone</td>
<td>Change the time zone for the devices to the one selected. Changing the time zone may adjust the date and time for a device.</td>
</tr>
</tbody>
</table>

Table 20.Options for setting the Time Zone

Notes and limitations

General
- Windows Server 2016 and Windows Server 2008 R2 – The SSDP Discovery service, network discovery, and file sharing must be enabled.

Network
- When transmitting in multicast, it is recommended that a router with multicast addressing support and switches with IGMP v2 support are used.
- Slow response from certain routers may cause a slow device detection in Device Manager.
- Windows 10/7 – If the controller system doesn’t have access to a DNS (Domain Name System) server, or if response from its DNS server is slow, the Device Manager may take a long time to start up (several minutes). To avoid this delay, configure the controller system to use a fixed IP address (such as local host 127.0.0.1) as its DNS server.

Advanced Display Modes
- The Advanced display modes feature is supported only on UltraLink E-Series 4-port devices. If Advanced display modes is enabled, and the system setup is made of a combination of 4-port and 2-port devices, limitations may be encountered.

Date and Time
- The Device Manager updates the date and time information of the device every two seconds.
Troubleshooting

What to do if a problem is encountered
Follow the steps below to troubleshoot if problems are encountered with the UltraLink E-Series product.

- Make sure the device is properly installed, the correct connectors are used, and that all connectors are properly fastened. For more information on the connection setup of the product, see the UltraLink E-Series hardware manual.
- Review the documentation provided with the product, including the information in this section, to see if the problem is already addressed. For information on the Device Manager software features and options, see the help file included with the Device Manager software.
- If the problem persists, contact Rose Electronics

Common problems and solutions
This section addresses common problems that could hinder usage of the devices.

<table>
<thead>
<tr>
<th>Problem:</th>
<th>The Device Manager is not starting or device is not discovered on the network</th>
</tr>
</thead>
<tbody>
<tr>
<td>Cause</td>
<td>The product may not be properly installed or connected or may be on a different subnet.</td>
</tr>
<tr>
<td>Solution</td>
<td>Verify the connection and status LEDs on the product. Also, make sure the product is properly connected, and that all connectors are properly fastened.</td>
</tr>
<tr>
<td>Cause</td>
<td>Windows Server 2016/2008 R2 only – The Windows SSDP Discovery service may be disabled on the system</td>
</tr>
</tbody>
</table>
| Solution | Make sure the SSDP Discovery service is enabled on the system  
1. **Windows Server 2016/2008 R2** – From the **Start** screen, click **All Programs > Administrative Tools > Services**. (Administrator rights may be needed to access Windows services.)  
2. Double-click SSDP Discovery.  
3. Next to Startup type, select Manual or Automatic.  
4. Click **OK**. |
| Cause | Network discovery and file sharing may not be enabled on the system |
| Solution | Enable network discovery and file sharing on the system  
1. **Windows 10/7** –  
   - **Windows 10** – Click **Start > Settings > Network & Internet > Ethernet**.  
   - **Windows 7** – Click **Start > Settings* > Control Panel > Network and Internet**.  
   2. Click **Network and Sharing Center > Change advanced sharing settings**.  
   (* Depending on the version and configuration of Windows, this part of the step may not be necessary.)  
3. Under the current profile, make sure the following options are selected:  
   - **Turn on network discovery**  
   - **Turn on file and printer sharing**  
4. If changes are made to the current profile settings, click **Save changes**. |
<p>| Cause | The Device Manager software being used may not be the latest version, or the firmware may be out of date. |
| Solution | Make sure all software is up to date |
| Cause | The firewall for the system or for the network may be enabled and may prevent communication with the devices. |
| Solution | Make sure the firewall is properly configured to allow the necessary communication between the controller system and the devices. For more information, see <strong>Firewall Requirements</strong>. |</p>
<table>

Table 21. Troubleshooting guide
Safety

The UltraLink E-Series system, like all electronic equipment, should be used with care. To protect yourself from possible injury and to minimize the risk of damage to the products, read and follow these safety instructions.

- Follow all instructions and warnings marked on the products.
- Except where explained in this manual, do not attempt to service the products yourself.
- Do not use the products near water.
- Assure that the placement of the products is on a stable surface.
- Provide proper ventilation and air circulation.
- Keep connection cables clear of obstructions that might cause damage to them.
- Use only power cords, power adapter and connection cables designed for the products.
- Keep objects that might damage the products and liquids that may spill, clear from the products. Liquids and foreign objects might come in contact with voltage points that could create a risk of fire or electrical shock.
- Do not use liquid or aerosol cleaners to clean the products. Always unplug the products from the power source before cleaning.

Remove power from the Unit and refer servicing to a qualified service center if any of the following conditions occur:

- The connection cables are damaged or frayed.
- The Unit has been exposed to any liquids.
- The Unit does not operate normally when all operating instructions have been followed.
- The Unit has been dropped or the case has been damaged.
- The Unit exhibits a distinct change in performance, indicating a need for service.
Maintenance and Repair

The products do not contain any internal user-serviceable parts. In the event a Unit needs repair or maintenance, you must first obtain a Return Authorization (RA) number from Rose Electronics or an authorized repair center. This Return Authorization number must appear on the outside of the shipping container.

See Limited Warranty for more information.

When returning a Unit, it should be double-packed in the original container or equivalent, insured and shipped to:

Rose Electronics
Attn: RA__________
10707 Stancliff Road
Houston, Texas 77099 USA

Technical Support

If you are experiencing problems, or need assistance in setting up, configuring or operating your products consult the appropriate sections of this manual. If, however, you require additional information or assistance, please contact the Rose Electronics Technical Support Department at:

Phone : (281) 933-7673
E-mail : TechSupport@rose.com
Web: www.rose.com

Technical Support hours are from: 8:00 am to 6:00 pm CST (USA), Monday through Friday.

Please report any malfunctions in the operation of this Unit or any discrepancies in this manual to the Rose Electronics Technical Support Department.
# UltraLink E-Series Part Numbers

</table>

Table 22. UltraLink E-Series Part Numbers
Setting up Link Redundancy

Link redundancy ensures that the UltraLink E-Series devices continue to work in case of a network cable or switch failure.

Connection setup guidelines

The following provides a basic outline for how to connect UltraLink E-Series Transmitters and Receiver to support link redundancy.

![Figure 19. Connecting Transmitters and Receivers to Support Link Redundancy](image)

**Note:**
Link Redundancy is only supported on the UltraLink E-Series Transmitter and Receiver units. It is not supported on the standalone Transmitter cards.

- Make sure the UltraLink E-Series units are all on the same subnet.
- Connect each Transmitter and Receiver unit to a managed network switch pair. Make sure to connect LAN1 to network switch 1 and connect LAN2 to network switch 2.
- Make sure the LAN1 and LAN2 connectors are connected before enabling the Link redundancy feature.

Enabling Link Redundancy

Follow these steps to enable link redundancy.

1. Connect the second network cable to the device.
2. Turn on the **Enable link redundancy** option in the Device Manager software:
   - **Networked mode** – Select the device, click **Network**, and then enable the **Enable link redundancy** option.
   - **Point-to-point mode** – In the OSD, click **More options**, and then enable the **Enable link redundancy** option.
3. The devices will automatically reboot for the changes to take effect.
Disabling Link Redundancy

Follow these steps to disable link redundancy.

1. Disconnect the second network cable.
2. Make sure that the devices are detected on the network.
3. Turn off the **Enable link redundancy** option in the Device Manager software:
   - **Networked mode** – Select the device, click **Network**, and then disable the **Enable link redundancy** option.
   - **Point-to-point mode** – In the OSD, click **More options**, and then turn off the **Enable link redundancy** option.
Appendix C - Configuring the Audio Settings

Configuring Audio Settings

Note:
It is recommended that the system’s Windows® audio settings are reviewed to know which DisplayPort output is configured to use audio.

Receiver Output

<table>
<thead>
<tr>
<th>Audio source from Transmitter</th>

Table 28. Network Firewall Requirements for UltraLink E-Series Devices
Accessing Windows firewall settings

Note:
Administrator rights may be needed to modify the Windows Firewall settings. For more information, see Windows documentation or contact the system administrator.

Windows 10
1. Click Start > Settings > Network & Internet > Ethernet > Windows > Firewall.
2. In the left panel, click Advanced Settings.

Windows 7
1. Click Control Panel > Network and Internet* > Network and Sharing Center. (* Depending on your configuration, these steps may be unnecessary.)
2. In the left panel, click Windows Firewall > Advanced Settings.

Adding rules to the Windows Firewall Settings
1. Windows 10 – Click Start > Settings > Network & Internet > Ethernet > Windows Firewall.
   Windows 7 – Click Control Panel > Network and Internet* > Network and Sharing Center*. (* Depending on your configuration, these steps may be unnecessary.)
2. Windows 10 – In the left panel, click Advanced Settings.
   Windows 7 – In the left panel, click Windows Firewall > Advanced Settings.
3. Click Inbound Rules.
4. In the Actions panel, click New Rule. Configure the new rule with the following settings:
   - **Rule** – Select Custom.
   - **Program** – Select All programs.
   - **Protocol and Ports** – Next to Protocol, select TCP. Next to Local port, select Specific ports. For the port number, enter 445. Next to Remote port, select All Ports.
   - **Scope** – Under the remote IP address, add the IP range to use for the Transmitter. A range (such as 192.168.1.0/24) or a single IP address (such as 192.152.168.62) can be used.
   - **Action** – Select Allow the connection.
   - **Profile** – Select the network location of your system (Domain, Private, or Public).
   - **Name** – Enter the name for your rule (such as UltraLink Extender – TCP rule).
5. In the Actions panel, click New Rule. Configure the new rule with the following settings:
   - **Rule type** – Select Custom.
   - **Program** – Select All programs.
   - **Scope** – Under the remote IP address, add the IP range you want to use for your transmitter. You can use a range (such as 192.168.1.0/24) or a single IP address (such as 192.152.168.62).
   - **Action** – Select Allow the connection.
   - **Profile** – Select the network location of your system (Domain, Private, or Public).
   - **Name** – Enter the name for your rule (such as UltraLink – ICMPv4 rule).

For more information on configuring the Windows firewall, see a network administrator.
